denominator zero.

To evaluate combinations of functions, you can first perform the operation on the functions. Then you can evaluate the new function for the given value.

Functions - MATH

This exercise differs from the previous one in that I not only have to do the operations with the functions, but I also have to evaluate at a particular x -value. To find the answers, I can either work symbolically (like in

Read Online 1 6 Function

the previous
example) and then
evaluate, or else I
can find the values
of the functions at
 $x = 2$ and then
work from there.
