can you reference a macro variable in libname - SAS ...

The only thing you need is know that you can use a period to mark the end of your macro variable so that SAS does not get confused and try to use trailing text that as part of the macro variable name. So you could assign the value of A this way and get the same result. %let a=&a.&separator_s.&aa.;

sas macro | Free Document Search Engine | 1pdf.net

Using Macro Variables. After a macro variable is created, you typically use the variable by referencing it with an ampersand preceding its name (&variable-name), which is called a macro variable reference. These references perform symbolic substitutions when they resolve to their value. You can use these references anywhere in a SAS program.

Solved: concatenating macro variables - SAS Support ...

Hello, this might be silly, but I'm having trouble creating macros interactively in a do loop; So, what I'm trying to do is create a macro variable per customer ID that would store all negative values for the variable Points for that specific client.

There is also a possibility that you are trying to generate macro variable name on the fly from other macro variables and the SAS parser is getting confused. This can sometimes be solved by either deriving the name first before using it.

AN INTRODUCTION TO MACRO VARIABLES AND MACRO PROGRAMS
At times you need to ensure that the macro processor creates a local macro variable rather than changing the value of an existing macro variable. In this case, use the %LOCAL statement to create the macro variable. Explicitly make all macro variables created within macros local when you do not need their values after the macro stops executing.

macro sas - SUGI 30 Hands-on Workshops Paper 130-30 SAS ...
Because NAME1 and NAME2 are valid SAS names, the macro processor searches for those macro variables rather than for NAME, and the references pass into the DATA statement without resolution. In a macro variable reference, the word scanner recognizes that a macro variable name has ended when it encounters a character that is not used in a SAS name.
