Oxygen sensors switch about every 100 ms on a good sensor. Sadly, Bluedriver would only update about once a second, even with displaying just a single sensor. This doesn't make diagnosing an oxygen sensor impossible, it just means that the data that you are seeing is only a rough approximation of what is actually happening.

An oxygen sensor is an element of the emissions system and aids in alterations to the air/fuel ratio, eliminating the need for manual altitude adjustments. Your oxygen sensor works in conjunction with your vehicle's CPU to determine whether or not your fuel vapor provided to the motor needs to be altered.

The oxygen sensor is responsible for calculating the amount of oxygen that was not burned in the exhaust system. Based on this information, the engine control unit will know if there is too much or too little oxygen being ignited in the chamber. If the oxygen sensor is not working properly, then the proper air and fuel mixture cannot be achieved.

Acura TL 2004-2008 review Maintenance tips: Change your oil regularly; Toyota recommends using 5W-30 oil in both the 4-cylinder and V6 engines. Watch out for coolant leaks and keep the engine coolant topped up; overheating may result in very expensive repairs. Change the transmission fluid when it gets dirty.

Used Acura RSX for Sale Near Me (with Photos) - CARFAX  
The oxygen sensor is a tool used to confirm and maintain the fuel/air ratio. When the mass airflow, the intake air temperature and oxygen sensor show a disparity a leak is recognized and the code P2279 is set. Air leaks at the air filter or hoses leading up to the mass airflow sensor (MAF) or throttle body are of no concern.
