Architectural Design Manual - Veterans Affairs
DOE-2 is a widely used and accepted free ware building energy analysis program that can predict the energy use and cost for all types of buildings. DOE-2 uses a description of the building layout, constructions, operating schedules, conditioning systems (lighting, HVAC, etc.) and utility rates provided by the user, along with weather data, to perform an hourly simulation of the building and to ...

Dedicated outdoor air system - Wikipedia
Notes to the table above. 1. HVAC equipment operated at higher air speeds than those for which it was designed loses efficiency and for filters, will begin to bypass rather than remove particles from building air.. 2. Bypass air is used in some heat pump systems to control system performance and economy by sending some air around rather than through the cooling or evaporator coil.

Air Flow Rate in HVAC Systems CFM & fpm air flow speed ...
The IRS published a rule change in 2008 (Notice 2008-40) that changed the percentages needed for the tax deduction. The building needs to show 10% energy and power cost savings for envelop e improvements, 20% for lighting improvements, and 20% for HVAC improvements. These savings
