The most common reinforced masonry beam is a lintel. Lintels are beams that support masonry over openings. Lintel design follows the same basic steps, whether allowable-stress or strength design is used: 1) Shear design: Calculate the design

ALLOWABLE STRESS DESIGN TEK 14-7B OF CONCRETE MASONRY ...

Solution: Reinforced masonry design requires that a grout/reinforcement spacing be assumed. The grout spacing affects the wall weight, which in turn affects the seismic load. Assume a grout spacing of 48 in. o.c. Check Load Combination G ($0.6D + 0.7E$). Wall weight is 44 psf, and $R = 2.5$ for reinforced masonry.
