2 and 6 are similar, as are 5 and $-$. We combine them by adding their coefficients. In practice, it is not necessary to change the order of the terms. The student should simply see which radicals have the same radicand.. As for 7, it does not "belong" to any radical.

Note: '2n' in algebra, as in part c), indicates an even number, that is, a multiple of 2. The variable n typically signifies an integer. We signify an odd number, then, as '2n + 1,' as in part g).. Problem 6. Simplify each radical. Remove the even powers. (Assume that the variables do not have negative values.)
