India is the second most populous country in the world with a population of about 1.25 billion people in 2013. The population is growing at a rate of about 1.2 % each year. If this rate continues, the population of India will exceed China's population by the year 2031. When populations grow rapidly, we often say that the growth is "exponential," meaning that something ...

EXPONENTIAL GROWTH. A function that models exponential growth grows by a rate proportional to the amount present. For any real number  $x$  and any positive real numbers  $a$  and  $b$  such that  $b \neq 1$ , an exponential growth function has the form  $f(x) = ab^x$  where  $a$  is the initial or starting value of the function.
