The standard numbering system was published by the Air Transport Association on June 1, 1956. While the ATA 100 numbering system has been superseded, it continued to be widely used until it went out of date back in 2015, especially in documentation for general aviation aircraft, on aircraft Fault Messages (for Post Flight Troubleshooting and Repair) and the electronic and printed manuals.

Air data inertial reference unit - Wikipedia

The 737-300's were soon available with EFIS, an option which most operators took. The EADI included a speed tape, radio altimeter, groundspeed indicator, and FMA annunciations. The EHSI has a selectable display either to represent the old HSI or a moving map display. See navigation section for details.

DISCUSSION: References: AWM 525.677 Relief may be granted provided a standby pitch trim system or trim wheel is available and suitably located. Trim capability through the autopilot system or a stability augmentation system is not an acceptable back-up to cater to the next failure, that is, failure of the remaining control wheel trim switch.
