Don't make this mistake... I use the Asus P5N-E 650i SLI board and replaced it with an eVGA 750i FTW what a nightmare Forget SLI, I couldn't even get a single 9600GT card to work on this board, they sent me 2 bad boards in a row. I did finally get them working in SLI on the P5N-E with the new PSU (which I tested with the 750i several times).

A basic search would have told you that every 750i mobo except for the 750i FTW has only 8x8 SLI. You've been told roughly 8 freakin' times already that there is absolutely no reason for you to switch to the 750i FTW. How many times must we tell you switching to the 750i FTW is a stupid and wasteful use of money?
