A Japan Airlines Boeing 787-8 Dreamliner, operating as JL17 from Vancouver, Canada to Tokyo/Narita, Japan, was at 140 km east of Narita when the No.2 engine had to be shut down. Partial fan ice shedding resulted in fan imbalance that in turn caused substantial damage to the engine and an in-flight non-restartable power loss.

WING & ENGINE Anti-Ice systems! Explained by CAPTAIN JOE

The TKS Ice Protection System, manufactured by CAV Ice Protection, is a fluid-based ice protection system used to help aircraft safely exit in-flight icing conditions. The system uses a glycol-based fluid to cover the critical surfaces of an aircraft and prevent the risk of any ice forming on the leading edges of the wings.
