MAP sensor repair advice. A MAP sensor is not a maintenance item and does not have specific service interval. Since it does have a moving rubber diaphragm, it can fail but, it will typically last the life of the engine. If a MAP sensor is suspect, a professional repair facility will perform electrical testing on the sensor.

A 99 civic actually doesn't have a mass air flow sensor. It uses a Manifold Absolute Pressure (MAP) sensor and the Throttle Position Sensor (TPS) instead to determine how much air is entering the...

MAP Sensor compatible with 1996-2000 Honda Civic - amazon.com

A faulty Honda Civic MAP Sensor can often result in a decline in a car's efficiency and raise carbon emissions. Your Honda's Honda Civic MAP Sensor is used to find out the density of air entering your engine by analyzing the pressure in the intake manifold. A malfunctioning Honda Civic MAP Sensor might reduce your car's engine function.

Where is the maf sensor on a 1999 Honda civic located ...

The manifold absolute pressure sensor, or MAP sensor, is used to measure the amount of air flowing through the intake system and into the engine. The sensor sends airflow rate data to the Honda engine control unit, or ECU, which can then adjust the air-to-fuel ratio for optimum fuel combustion. Over time, the Honda ...

Part 1 -How to Test the MAP Sensor (1.5L Honda Civic)

A dead MAP sensor won't read anything, while a failing MAP sensor might give the ECM data that makes no sense, such as low engine vacuum when the throttle position sensor (TPS) and crankshaft position sensor (CKP) both show the engine at idle.

7 Symptoms of a Broken MAP Sensor

The MAP sensor measures the absolute pressure inside the intake manifold of the engine. At sea level, atmospheric pressure is about 14.7 psi (pounds per square inch). When the engine is off, the absolute pressure inside the intake equals atmospheric pressure, so the MAP will indicate about 14.7 psi.
