This thesis discusses the concept of collocation in translation from different theoretical and practical perspectives. As collocation is seen by many translation scholars as a complex translation problem, this research is an attempt to investigate the nature of this complexity in translation practice through short stories.

The geometric transformation is a bijection of a set that has a geometric structure by itself or another set. If a shape is transformed, its appearance is changed. After that, the shape could be congruent or similar to its preimage. The actual meaning of transformations is a change of appearance of something.
