22 HALT-Highly Accelerated Life Testing A test in which stresses are applied to the product well beyond normal shipping, storage and in-use levels. HALT is Scientific. HALT has Statistical Differences with ALT Advantages Quick Screening of Weak Products. At Highly Stressed Levels, a few samples can be used. (Ex. Prototypes) Compresses Design Time.

Accelerated Durability Test - Applied Technical Services

Product reliability is essential for success, and Accelerated Life Testing makes it possible to answer these questions before your launch. This process accelerates testing by increasing stress on a device to induce and accumulate damage faster than in the field. From there, you can better understand the catalyst behind the failure.

ATS performs accelerated reliability testing to determine the long-term durability and efficacy of client products and mission-critical components.

Accelerated Reliability Testing Standardization ...

Accelerated life testing is the process of testing a product by subjecting it to conditions (stress, strain, temperatures, voltage, vibration rate, pressure etc.) in excess of its normal service parameters in an effort to uncover faults and potential modes of failure in a short amount of time.

Accelerated Reliability and Durability Testing Technology ...

Accelerated Reliability and Durability Testing (ART& ADT) is a source of initial information for Accurate Quality, Reliability, Maintainability, and Durability Prediction. Material inspectors/auditors view of reliability is that the product is assessed against a specification or set of quality tests and having passed is delivered to the customer.

ACCELERATED RELIABILITY AND DURABILITY TESTING TECHNOLOGY

There is a great need for standardization for accelerated reliability testing (ART) / accelerated durability testing (ADT). Standardization will have an important influence on ART and ADT development and implementation. By geographic designation, there are international, regional, and national standards.
