

## *Active Learning For Hierarchical Text Classification*

*Getting the books active learning for hierarchical text classification now is not type of inspiring means. You could not single-handedly going past books addition or library or borrowing from your connections to door them. This is an no question simple means to specifically get lead by on-line. This online broadcast active learning for hierarchical text classification can be one of the options to accompany you subsequent to having other time.*

*It will not waste your time. say you will me, the e-book will utterly appearance you extra thing to read. Just invest tiny era to log on this on-line statement active learning for hierarchical text classification as skillfully as evaluation them wherever you are now.*

*Freebook Sifter is a no-frills free kindle book website that lists hundreds of thousands of books that link to Amazon, Barnes & Noble, Kobo, and Project Gutenberg for download.*

*HDLTex: Hierarchical Deep Learning for Text Classification*  
*Active learning (AL) is a subfield of machine learning which addresses methods to build models with fewer, but more representative instances. Even though AL has been vastly studied, it has not been thoroughly investigated in hierarchical multi-label classification, a learning task where multiple class labels can be assigned to an instance and these labels are hierarchically structured.*

## *Active Learning For Hierarchical Text Classification*

*Text classification is probably not the first thing that comes to mind when you think of machine learning, but as far as solid practical real-world applications go, it's arguably at the top of the pile. Before we get started on hierarchical classification, let's get a bit of jargon out of the way first.*

## *Active learning for hierarchical multi-label ...*

*In many multi-label tasks, the labels are organized into hierarchies from coarse to fine. The labels at different levels of the hierarchy contribute differently to the model training, and also have diverse annotation costs. In this paper, we propose a multi-label active learning approach to exploit the label hierarchies for cost-effective queries.*

## *On active learning in hierarchical classification ...*

*Active Learning, Hierarchical Classification, Label Tree Embedding 1. INTRODUCTION Obtaining labels is an expensive or time-consuming process, especially for large scale multi-class classification problems. Active learning is proposed to make the learning task more efficient [12], by intelligently choosing specific unlabeled*

## *Cost-Effective Active Learning for Hierarchical Multi ...*

*Active learning has been shown to reduce the training examples significantly, but it has not been applied to hierarchical text classification due to several technical challenges. In this paper, we study active learning for hierarchical text classification.*

*classification has recently gained significant attention, as classification accuracy can often be improved by extracting spatial information from neighboring pixels.*

*Active Learning for Hierarchical Text Classification  
Hierarchical Sampling for Active Learning class labels. We describe an active learning strategy with good statistical properties, that will discover and exploit any informative pruning of the cluster tree. For instance, suppose it is possible to prune the cluster tree to  $m$  leaves ( $m$  unknown) that are fairly pure in the labels of their ...*

*(PDF) Reinforcement active learning hierarchical loops  
In 2014 the 28,100 active, scholarly, peer-reviewed, ... This architecture is particularly important for learning time-dependent structures to include words or characters in text . Deep learning for hierarchical classification is not new with this paper, although the specific architectures, ...*

*[PDF] Active Learning for Hierarchical Text Classification ...*

*In this paper, we consider the problem of active learning when the categories are represented as a tree. Our goal is to exploit the structure information of the label tree in active learning to select the most informative samples to be labeled. We propose an algorithm that estimates the semantic space, embedding the category hierarchy.*

*On active learning in hierarchical classification*
