A metalloid is a type of chemical element which has a preponderance of properties in between, or that are a mixture of, those of metals and nonmetals. There is no standard definition of a metalloid and no complete agreement on which elements are metalloids. Despite the lack of specificity, the term remains in use in the literature of chemistry.. The six commonly recognised metalloids are boron ...

The material of choice of a given era is often a defining point. Phrases such as Stone Age, Bronze Age, Iron Age, and Steel Age are historic, if arbitrary examples. Originally deriving from the manufacture of ceramics and its putative derivative metallurgy, materials science is one of the oldest forms of engineering and applied science. Modern materials science evolved directly from metallurgy ...

The simplest representation of floodplain flow is to treat the flow as one-dimensional along the centre line of the river channel (Brunner, 2016, DHI, 2003). Many hydraulic situations can make the 1D assumption, either because a more detailed solution is unnecessary (e.g. the purpose does not require knowledge in other dimensions) or because the flow is markedly 1D, such as in a confined ...
