Sex differences in psychology are differences in the mental functions and behaviors of the sexes and are due to a complex interplay of biological, developmental, and cultural factors. Differences have been found in a variety of fields such as mental health, cognitive abilities, personality, emotion, sexuality, and tendency towards aggression. Such variation may be innate, learned, or both.

Sex differences in psychology -  
Wikipedia

The findings from the study, while interesting, are limited in some ways. Firstly, the researchers used human body parts, rather than whole bodies. Secondly, the remains were tested in a lab-controlled environment, so they were not exposed to external factors such as light, heat, moisture or insect activity, which may have altered the results.

Deadly secrets—the science of decomposition - Curious  
-Daniel Goleman, co-author Altered Traits: Science Reveals How Meditation Changes Your Mind, Brain and Body —Very few writers, if any, have the gravitas and journalistic cred to tackle this explosive subject—from both the outside and the inside—extract it from its nationally traumatic and irrationally over reactive past, and
