ATP1A3-related neurologic disorders represent a clinical continuum in which at least three distinct phenotypes have been delineated: rapid-onset dystonia-parkinsonism (RDP); alternating hemiplegia of childhood (ACH); and cerebellar ataxia, areflexia, pes cavus, optic atrophy, and sensorineural hearing loss (CAPOS). However, some affected individuals have intermediate phenotypes or only a few ...

A transmission circuit is a redstone circuit that allows redstone signals to move from one place to another. Redstone signals can be transmitted from one place to another with redstone wire – a line of redstone dust. Redstone wire can transmit a signal only 15 blocks – after that it needs a repeater to boost the signal back up to full strength. When crossing each other, redstone wires must ...

Joule heating, also known as resistive, resistance, or Ohmic heating, is the process by which the passage of an electric current through a conductor produces heat.. Joule's first law (also just Joule's law), also known in countries of former USSR as the Joule – Lenz law, states that the power of heating generated by an electrical conductor equals the product of its resistance and the square of ...

An integrated circuit or monolithic integrated circuit (also referred to as an IC, a chip, or a microchip) is a set of electronic circuits on one small flat piece (or "chip") of semiconductor material, usually silicon. Large numbers of tiny MOSFETs (metal – oxide – semiconductor field-effect transistors) integrate into a small chip. This results in circuits that are orders of magnitude smaller ...
