Plant and animal cells 1.1 - University of Hawaii at Hilo

Most cells are very small; most are invisible without using a microscope. Cells are covered by a cell membrane and come in many different shapes. The contents of a cell are called the protoplasm. The following is a glossary of animal cell terms: cell membrane - the thin layer of protein and fat that surrounds the cell. The cell membrane is semipermeable, allowing some substances to pass into the cell and blocking others.

Pymokriwul: animal cell diagram without labels

Vacuoles are present in most animal cells, however, are smaller, as compared to the plant cell vacuole. A plant cell usually has one large vacuole, however, an animal cell is seen to contain two to three small vacuoles. The main role of vacuoles in animal cells is getting rid of waste materials and excess water.
