Animal Cognition Evolution Behavior And

Animal cognition describes the mental capacities of non-human animals and the study of those capacities. The field developed from comparative psychology, including the study of animal conditioning and learning. It has also been strongly influenced by research in ethology, behavioral ecology, and evolutionary psychology, and hence the alternative name cognitive ethology is sometimes used.

Evolutionary Anthropology

Questions about animal consciousness – in particular, which animals have consciousness and what (if anything) that consciousness might be like – are both scientific and philosophical. They are scientific because answering them will require gathering information using scientific techniques – no amount of arm-chair pondering, conceptual analysis, logic, a priori theory-building ...

Animal Learning and Intelligence News -- ScienceDaily

Introduction. The topic of emotion and evolution typically brings to mind Darwin's classic treatise, Emotions in Man and Animals (Darwin, 1872). In this book Darwin sought to extend his theory of natural selection beyond the evolution of physical structures and into the domain of mind and behavior by exploring how emotions too might have evolved.
