List of learning modules. The following tutorials show how to solve selected fluid flow problems using ANSYS Fluent. The tutorial topics are drawn from Cornell University courses, the Prantil et al textbook, student/research projects etc. If a tutorial is from a course, the relevant course number is indicated below.

Tutorial | Supersonic Flow CFD Simulation of a Space Reentry Vehicle with ANSYS CFX

I'm trying to run supersonic flow simulations around a 3D rocket body. I'm simulating a quarter of the geometry with symmetry applied on the side faces. When I have run the simulation with 100 iterations, my output is showing uniform pressure nearly everywhere throughout the flow without even a hint of a shock wave or skin friction.

the oncoming flow to subsonic speeds for combustion, a scramjet (supersonic combustion ramjet) is used in place of a ramjet. This paper is aimed at modeling the supersonic flow inside Scramjet engine using the Computational Fluid Dynamics ANSYS Fluent. The purpose of this test is to validate FLUENT's ability to predict reflecting shock waves

Supersonic compressible flow CFD tutorial

This tutorial leads you through the steps for generating a mesh in GAMBIT for a wedge geometry. The generated mesh can then be read into FLUENT for fluid flow simulation. In an external flow such as that over a wedge, we need to define a farfield boundary and mesh the region between the wedge and the farfield boundary.

Ansys Fluent Supersonic Flow Tutorial

This CFD ANSYS tutorial demonstrates how to mesh a 2D object and carry out a supersonic CFD simulation. The objective of this simulation is to capture the oblique shock wave at an expected angle from the horizontal line of the object. I used an online tool to calculate the expected angle of the shock wave and the downstream flow Mach number.
