Find the lengths of the arcs s and s ' in the figure if r = 4 and ' = 60 ° . Solution: To find the arc length, s, first we have to find the angle that subtends the arc s, + = 360 ° . = 360 ° - = 360 ° - 60 ° = 300 ° . Now, we can apply the formula for finding the length of an arc if the angle is given in degrees.

Section 2-1 : Arc Length. Initially we ' ll need to estimate the length of the curve. We ' ll do this by dividing the interval up into n equal subintervals each of width x and we ' ll denote the point on the curve at each point by Pi. We can then approximate the curve by a series of straight lines connecting the points.
