In contrast, we use statistical models to refer to methods that apply global structure to the data. A simple example is a linear regression model (statistical) vs. a k-nearest-neighbors algorithm (machine learning). A given record would be treated by linear regression in accord with an overall linear equation that applies to all the records.

Many standard statistical tools as well as more advanced ones are used extensively in data min- ing. Simulation and risk analysis relies on spreadsheet models and statistical analysis to examine the impacts of uncertainty in the estimates and their potential interaction with one another on the output variable of interest.
