A plot of the impedance as a function of frequency for a single-tuned filter is shown in Fig. 40.14. The filter is based on a 480 V, 300 kvar (three-phase) capacitor bank and is tuned to the 4.7th harmonic with a quality factor,  $Q$ , of 150. Note that the quality factor is a measure of the “sharpness” of the tuning and is defined as  $X/R$  where  $X$  is the inductive reactance for the filter ...
