450.10(A) Transformer Grounding. Dry-Type Transformer

...

Transformers are often wired in reverse with the primary conductors terminated to the secondary terminals and the secondary conductors terminated to the primary terminals. One of the most common applications is a dry-type transformer installed in a facility where the utility supplied voltage is 120/208 volts.

Protection of Transformer only. Such overcurrent protection will not necessarily protect the primary or secondary conductors or equipment connected on the secondary side of the transformer.

Overcurrent Protection of Transformer (NEC 450.3)
Article 240 lists requirements for transformer feeder protection, while Art. 450 provides requirements for transformer protection. The Fine Print Note of Sec. 450.3 states the relationship between the two different Articles: "the overcurrent protection required by Art. 450 may also satisfy the requirements in Art. 240 for conductor protection, and vice versa, but it
