The behavior of weak solutions to the Navier-Stokes and Euler equations is however mysterious: the equations appear to be too soft at this low smoothness level. One may exhibit weak solutions which have finite kinetic energy, and have compact support in time: the fluid is fully at rest, then it starts to move, and then it goes back to sleep.

Solution for (c).  $1 \neq H$ , though it is the inverse of 1. Solution for (d).  $H$  is a subgroup since it is clearly a subset, contains 1, is closed under multiplication since the product of two positive real numbers is a positive real number, and since  $x \in H$  has inverse  $1/x \in H$ , which is still positive and real. Solution for (e).
