Before they can take advantage of the next generation of telescopes, of course, engineers have to craft the parts — namely, those essential mirrors. Astronomers have developed two ...

Astronomy Before the Telescope - Google Books

For a telescope intended for astronomy, and for which photography is a future prospect, consideration should be given to some form of mount that automatically counteracts Earth's rotation. It's far easier to track a celestial object with a scope mounted this way, since you don't have to concern yourself with turning the scope about one axis — not two simultaneously, as in the alt-az.

PLEASE DO NOT BUY ANY TELESCOPE UNTIL YOU READ THIS ...

Telescopes that have 4 or 5 inch diameters are great for viewing solar system objects like the planets, our Moon, and Jupiter's moons. Mars and Uranus can be difficult with a scope this small but it's not impossible. A telescope of this size is probably a good starting point for a beginner.
