Air dryers remove moisture from the air. Each dryer system- desiccant dryer, refrigerated dryer, and membrane dryer, uses its own technique. The measurement of dry compressed air after processing is known as its 'dew point'. The lower the temperature of the dew point, the less amount of water vapor in the air.*

Microsoft

Dryers are typically integrated into the compressor to ensure the correct level of air purity for the application. The unique differences in the type of dryer is based on the integrated agents in the machine to dry the incoming air. Refrigerated Dryers. This is the most common type of compressed air dryers and can be water- or air-cooled.
