X-ray photoemission spectroscopy (XPS) and auger electron spectroscopy (AES) were performed using the LAS-3000 surface analysis system (RIBER, France). XPS measurements were carried out using Al-K α X-rays (1489.6 eV, width 0.85 eV), the energy scale of the spectrometer has been calibrated with pure Cu samples, and the pressure in the XPS analysis chamber was -1×10^{-7} Pa.

Surface Analysis by Auger and X-Ray Photoelectron ...

Thin films (3.4 nm) of copper on germanium substrates were exposed to 2% alginic acid polysaccharide aqueous solution. Pre- and post-exposure characterization were done by Auger electron spectroscopy and X-ray photoelectron spectroscopy. Ancillary graphite furnace atomic absorption spectroscopy was used to monitor the removal process of the copper thin film from the germanium substrate.

Auger And X Ray Photoelectron

X-ray photoelectron spectroscopy and Auger electron spectroscopy. For XPS and AES the primary process is an ionization caused by either a photon or an electron, $m + h\nu \rightarrow m^{+*} + e^{-}$, or $m + e^{-} \rightarrow m^{+*} + 2e^{-}$, where m is an atom in the material. In photoionization an incident photon causes the ejection of an electron with a discrete kinetic energy, which is measured in XPS, leaving an ...

This first volume of the two-volume set discusses two closely related analytical techniques--Auger and X-ray photoelectron spectroscopy. Beginning with historical background of both AES and XPS, it provides in-depth examination of theory and practice of the two techniques.

Abstract. X-Ray photoelectron spectroscopy (XPS) is the most widely used surface analysis technique when information about the chemical status of the atoms, rather than high lateral resolution or low limits of detection, must accompany elemental analysis of the outermost atomic layers of a given specimen.

various surface and near-surface analytical techniques, such as X-ray photoelectron spectroscopy (XPS), Auger spectroscopy, SEM, neutron reflectometry, and others. XPS, in particular, has been essential for the characterization of the chemistries involved with thin oxide film growth.[3] The need for improved XPS analysis of

Practical Surface Analysis, Auger and X-ray Photoelectron ...

X-ray photoelectron spectroscopy (XPS) is a surface-sensitive quantitative spectroscopic technique based on the photoelectric effect that can identify the elements that exist within a material (elemental composition) or are covering its surface, as well as their chemical state, and the overall electronic structure and density of the electronic states in the material.

X-ray photoelectron spectroscopy and auger electron ...

X-ray photoelectron and Auger electron spectroscopy 6.3.3 The X-ray source for XPS In contrast to the electron source, the X-ray source energy depends on the choice of the anode material, resulting in the availability of a number of discrete energies rather than a continuous variation of the energy, as exists for electron and ion guns.
