The GAWK Manual - Table of Contents

The basic function of awk is to search files for lines (or other units of text) that contain certain patterns. When a line matches one of the

Online Library

Awk Manual

patterns, awk performs specified actions on that line. awk keeps processing input lines in this way until the end of the input file is reached. When you run awk, you specify an awk program which tells awk what to do.

awk(1): pattern scanning/processing -
Linux man page

Online Library

Awk Manual

The awk utility shall execute programs written in the awk programming language, which is specialized for textual data manipulation. An awk program is a sequence of patterns and corresponding actions. When input is read that matches a pattern, the action associated with that pattern is carried out.

Some versions of `awk` allow the third argument to be an expression that is not an lvalue. In such a case, `sub()` still searches for the pattern and returns zero or one, but the result of the substitution (if any) is thrown away because there is no place to put it. Such versions of `awk` accept expressions like the following:

Awk Manual

The awk utility interprets a special-purpose programming language that makes it possible to handle simple data-reformatting jobs easily with just a few lines of code. This manual teaches you what awk does and how you can use awk effectively.

Awk Manual

The name awk comes from the initials of its designers: Alfred V. Aho, Peter J. Weinberger, and Brian W. Kernighan. The original version of awk was written in 1977 at AT&T Bell Laboratories. In 1985, a new version made the programming language more powerful, introducing user-defined functions, multiple input
