Blood Type Punnett Square Practice Worksheet
Each square in the Punnett square represents a blood type that the baby could have. Within each square, write the allele from the mother and the allele from the father that correspond to the row and column of that square.

Pedigrees Quiz by Serene Science | Teachers Pay Teachers
Blood Type (Codominance) Drag genes from the left side of the table into the top right box to create the genetic cross. Place the genes on both sides of the "x" symbol. Check your work. From the remaining genes, drag genes into the middle box to make the Punnett square. There should be no genes left over.

Blood Type Punnett Square Practice
Blood Type Punnett Square Practice There are four major blood groups determined by the presence or absence of two antigens (proteins) – A and B – on the surface of red blood cells: Group A – has only the A antigen on red cells (and B antibody in the plasma) Group B – has only the B antigen on red cells (and A antibody in the plasma)

Punnett Square to determine possible blood types
If both parents have type A blood, then the alleles could be AA or AO, thus the allele A frequency is 75%, allele O frequency is 25% for both parents. So the chance of alleles OO is $25\% \times 25\% = 6.25\%$, alleles AA is $75\% \times 75\% = 56.25\%$, alleles AO is $75\% \times 25\% = 18.75\%$, alleles OA is $25\% \times 75\% = 18.75\%$.

Blood Type (Codominance) - zeroBio
In this example, the Punnett square is used to determine the possible blood types of the father while the mother is confirmed Type O and all children are confirmed Type O.
