### **1984 BMW K100 Valve seat insert exhaust lead-free ...**

It was calculated that a K100 basic would need 83 kW to reach the top speed of a “RS” or, the other way: at 200 km/h a “RS” consumes three litres fuel and needs 20 PS less than a basic K100 ! The only technical difference is a “longer” rear wheel ratio which is standard at the “RS” and was available on request for the other bikes.

On the other hand, the shim-and-bucket valve gear made perfect sense in the K100 engine. Not only does that arrangement meet BMW's requirements for simplicity and long intervals between adjustments, but it allows the camshafts and followers to be easily serviceable just by removing the cam cover on the left side of the motor.
