*727 Nose Wheel Brakes - PPRuNe Forums  
Hi, I was doing a bit of performance testing as part of getting back into flying the steam gauges after a period of flying glass, and generally getting used to how the 727 handled, and noticed the following whilst messing around for a few minutes (as you do :D). I was just under MLW at 150,000 lbs, and decided to try and land at a small airfield just south of Heathrow.*

The anti-skid system controls the braking through the 'return' side of the brake system. Different from the auto-brake system, which controls braking through the 'supply' side of the brake system, but they have to work using the same hydraulic braking system, complementing each other. When the impending skid is sensed, the brake pressure is ...*

The Boeing 727 is an American midsized, narrow-body three-engined jet aircraft built by Boeing Commercial Airplanes from the early 1960s to 1984. It can carry 149 to 189 passengers and later models can fly up to 2,700 nautical miles (5,000 km) nonstop. Intended for short and medium-length flights, the 727 can use relatively short runways at smaller airports.*

*Anti Skid. - Airliners.net  
Sorry I don't know the colour but quite a few 727's had nose wheel brakes. So they also had 5 release lights. ( single anti skid system for both nose wheels ) Checklist response by the F/E before T/O was "Anti-skid 5 releases". I suspect they were green, as they wanted to see the lights on, green is good!!*
