I have to solve the 1D Time-independent Schrödinger equation (TISE) using the shooting algorithm. As far as I understood from this video on Shooting method for solving BVP, I will have to solve the problem by using IVP solvers (like RK2 or RK4 methods), and guess a value for the derivative of the function at the starting point. Then, I iterate over to the other end point.

If k is not None use k node samples to estimate betweenness. The value of $k \leq n$ where n is the number of nodes in the graph. Higher values give better approximation. normalized bool, optional. If True the betweenness values are normalized by $2/((n-1)(n-2))$ for graphs, and $1/((n-1)(n-2))$ for directed graphs where n is the number of nodes in G .

In graph theory, betweenness centrality is a measure of centrality in a graph based on

shortest paths. For every pair of vertices in a connected graph, there exists at least one shortest path between the vertices such that either the number of edges that the path passes through (for unweighted graphs) or the sum of the weights of the edges (for weighted graphs) is minimized.

PowerShell might look really strange to you. Many people assume PowerShell is basically CMD-prompt 2.0 because of the way it looks, but it really is a fully operational scripting language underneath. PowerShell has something called a cmdlet (command-let), which for the most part is the same idea as functions you 're used to from other languages.
