Other options: scrape off egg clusters (found on the backside of leaves) or spray neem on egg clusters and juvenile squash bugs.

Because squash bugs mate early in the season, covering with floating row covers until pollination time also works. Insects aren't the only pests in the garden. Learn some humane pest control tips for animals.

Bugs in the Garden | Wabbit Wiki | Fandom
The Common Garden Katydid is a quite common backyard buddy and garden visitor. It's a cousin to the grasshopper and cricket, about 4 to 6 cm in length with extremely long, thin antennae, and powerful back legs for jumping. There are about 1000 species in Australia and they are part of the orthopteran group of insects, which means 'straight wings'.
