So, an 18-55mm lens used on a Nikon DX sensor – which has a 1.55x crop factor – is equivalent to a 28-85mm lens on a larger full frame camera sensor. This is also why you can't just say that a 28mm lens, for example, is a wide-angle.

### **Camera Lens Guide For Beginners**

Camera Lens Guide for Beginners (2020) If you are new in digital photography, you need to start with a camera with the most powerful lenses. Choosing the correct lens is the most important thing when it comes to camera use. What makes or mars a camera is the lenses quality.

### **The Absolute Beginners Guide to Camera Settings**

A camera without a lens is useless to a photographer. The lens is what focuses light from what you see through the viewfinder into a tiny, (typically) 35mm spot on the back of your film, DSLR, or mirrorless camera. If you remove the lens from your camera, the only kind of image you can produce is white light. Consequently, a high-quality lens can help you capture great photos even with a cheap ...
