heart contracting. B the heart valves opening and closing. C the blood moving in and out of the heart. D the blood moving in and out of the lungs.

Physiology Multiple Choice Question Bank

The heart receives oxygen-deficient blood (see the white arrows) from the body into the right upper atrium. When the heart contracts, the right lower ventricle will pump the blood into the lungs, where the carbon dioxide is exchanged for oxygen. After the exchange, the blood containing fresh oxygen flows into the left upper atrium.
