A Euclidean plane with a chosen Cartesian coordinate system is called a Cartesian plane. In a Cartesian plane one can define canonical representatives of certain geometric figures, such as the unit circle (with radius equal to the length unit, and center at the origin), the unit square (whose diagonal has endpoints at  $(0, 0)$  and  $(1, 1)$ ), the unit hyperbola, and so on.

*The Cartesian Coordinate System looks like a piece of graph paper. At the center are two perpendicular number lines. The point where these lines intersect is called the origin. The coordinates of the origin is the ordered pair  $(0, 0)$ . Plotting Ordered Pairs. The two perpendicular lines that form the center of our Cartesian Coordinate System are called axis.*
