Regression Models for Categorical Dependent Variables ...

In statistics, a categorical variable is a variable that can take on one of a limited, and usually fixed, number of possible values, assigning each other unit of observation to a particular group or nominal category on the basis of some qualitative property. In computer science and mathematics, categorical variables are referred to as enumerations or enumerated ...

Comment from the Stata technical group. Regression Models for Categorical Dependent Variables Using Stata, Third Edition, by J. Scott Long and Jeremy Freese, is an essential reference for those who use Stata to fit and interpret regression models for categorical data. Although regression models for categorical dependent variables are common, few texts explain how to interpret such models; this ...

Categorical variable - Wikipedia

In the logistic regression model the dependent variable is binary. This model is the most popular for binary dependent variables. It is highly recommended to start from this model setting before more sophisticated categorical modeling is carried out.

A unified treatment of the most useful models for categorical and limited dependent variables (CLDVs) is provided in this book. Through the use of graphical methods, the relationships among the models are made explicit, and common methods of derivation, interpretation and testing are applied. In addition, the author shows how the models relate to linear regression.

Long works from the premise that the major difficulty with the analysis of limited and categorical dependent variables (LCDVs) is the complexity of interpreting nonlinear models, and he provides tools for interpretation that can be widely applied across the different techniques."--Robert J.
