detect HIV sooner after infection than tests done with blood from a finger prick or with oral fluid. Most rapid tests and the only currently approved HIV self-test are antibody tests.

CDC HIV Testing in the FACT SHEET United States

Complement-dependent cytotoxicity (CDC) is an effector function of IgG and IgM antibodies. When they are bound to surface antigen on target cell (e.g. bacterial or viral infected cell), the classical complement pathway is triggered by bonding protein C1q to these antibodies, resulting in formation of a membrane attack complex (MAC) and target cell lysis. ...

Screening for Antibody to the Human Immunodeficiency Virus

HIV initially activates the immune system as a normal response. -CD4 T lymphocytes proliferate and become more active. -But this amplifies the target cell population for HIV. HIV archives its genome in a place no drug can reach. -HIV infects certain long-lived immune cells and integrates its genome into the host cell genome.
