### **Cell Growth And Division (mitosis) - ProProfs Quiz**

So far in this chapter, you have read numerous times of the importance and prevalence of cell division. While there are a few cells in the body that do not undergo cell division (such as gametes, red blood cells, most neurons, and some muscle cells), most somatic cells divide regularly.

### **www.portnet.org**

The cell cycle is the regular pattern of growth, DNA duplication, and cell division that occurs in eukaryotic cells. Figure 1.1 shows its four main stages: gap 1, synthesis, gap 2, and mitosis. Gap 1, synthesis, and gap 2 together make up what is called interphase. The stages of the cell cycle get their names from early studies of cell division.
