Cell Structure - Biology Q&As

Plants need chloroplasts and mitochondria because they require both functions. 9. Possible student answer: One function of lysosomes is to remove debris that might clutter a cell. This is analogous to the work a cleanup crew in a factory might perform. 10. A plant cell has cell walls, while an animal cell does not. 11. The cell membrane is a phospholipid bilayer that is selectively permeable. It allows some substances to pass through while blocking others. 12. The nucleus is the control center of the cell. It contains the cell's DNA and is surrounded by a nuclear envelope. 13. The cytoplasm is the fluid-filled space inside the cell. It contains various organelles and is the site of many cellular processes. 14. The cell membrane is a phospholipid bilayer that is selectively permeable. It allows some substances to pass through while blocking others. 15. The nucleus is the control center of the cell. It contains the cell's DNA and is surrounded by a nuclear envelope. 16. The cytoplasm is the fluid-filled space inside the cell. It contains various organelles and is the site of many cellular processes. 17. The cell membrane is a phospholipid bilayer that is selectively permeable. It allows some substances to pass through while blocking others. 18. The nucleus is the control center of the cell. It contains the cell's DNA and is surrounded by a nuclear envelope. 19. The cytoplasm is the fluid-filled space inside the cell. It contains various organelles and is the site of many cellular processes.

Cell structure and functions Class 8 CBSE practice questions

Though this animal cell diagram is not representative of any one particular type of cell, it provides insight into the primary organelles and the intricate internal structure of most animal cells. Furthermore, it is easy to distinguish between a plant and animal cell diagram just by its shape. The cell membrane is a phospholipid bilayer that is selectively permeable. It allows some substances to pass through while blocking others. The nucleus is the control center of the cell. It contains the cell's DNA and is surrounded by a nuclear envelope. The cytoplasm is the fluid-filled space inside the cell. It contains various organelles and is the site of many cellular processes.
