Chapter 12 Forces and Motion

Summary 12.1 Forces A force can cause a resting object to move, or it can accelerate a moving object by changing the object's speed or direction. •Aforce is a push or a pull that acts on an object. One newton is the force that causes a 1-kilogram mass to accelerate at a rate of 1 meter per second each second.

A force can cause a resting object to move, or it can accelerate a moving object by changing the object's speed or direction. When the forces on an object are balanced, the net force is zero and there is no change in the object's motion. When an unbalanced force acts on an object, the object accelerates.
