CHAPTER 15 | Aqueous Equilibria: Chemistry of the Water World

The Water Molecule: a Review Water is a simple tri-atomic molecule, H 2 O Each O-H bond is highly polar, because of the high electronegativity of the oxygen (N, O, F, and Cl have high values) bond angle of water = 105o due to the bent shape, the O-H bond polarities do not cancel. This means: water is a polar molecule.
