2. Sensory receptors transduce stimulus energy and transmit signals to the CNS  
Stimuli = forms of energy  
Sensation involves converting energy into a change in the membrane potential of sensory receptors  
Sensations are action potentials that reach the brain via sensory neurons  
The brain interprets sensations, giving the perception of stimuli

Concept 50.1: Sensory receptors transduce stimulus energy and transmit signals to the central nervous system •All stimuli represent forms of energy  
•Sensation involves converting energy into a change in the membrane potential of sensory receptors •When a stimulus's input to the nervous system is processed a motor response may be generated
