The female reproductive system functions to produce gametes and reproductive hormones, just like the male reproductive system; however, it also has the additional task of supporting the developing fetus and delivering it to the outside world. Unlike its male counterpart, the female reproductive system is located primarily inside the pelvic cavity.

pdf for chapter 16 anatomy and physiology The Reproductive ...

**THE REPRODUCTIVE SYSTEM** The biological function of the reproductive system is to produce offspring. The essential organs are producing germ cells (testes in males and Ovaries in females). The male manufactures sperm and delivers them to the female's reproductive tract. The female, in turn, produces eggs.
