The Food and Drug Administration approved a virtual reality-based treatment for children with the visual disorder amblyopia, or lazy eye, the company behind the therapy announced today. The Verge reports: Luminopia's approach uses TV and movies to develop the weaker eye and train the eyes to work together. Patients watch the show or movie through a headset that shows the images to each eye ...

Slashdot: News for nerds, stuff that matters

Predicting the next word someone might say -- like AI algorithms now do when you search the internet or text a friend -- may be a key part of the human brain's ability to process language, new research suggests. From a report: How the brain makes sense of language is a long-standing question in neuroscience. The new study demonstrates how AI algorithms that aren't designed to mimic the brain ...

Expanding control of the tumor cell cycle with a CDK2/4/6 ...

Howard spent his early career at Novartis & Biogen working in commercial, manufacturing, and program leadership. Howard was formerly a consultant with BCG where he focused on R&D and portfolio strategy for biopharma clients. Howard holds a B.Sc. in chemical engineering from Yale, as well as a Ph.D. in biomedical engineering from Harvard & MIT.
