Three acene-extended triptycenes, which contain TIPS-ethynyl functionalized anthracene, tetracene, and pentacene as subunits, are synthesized and characterized. A preliminary study indicates that these molecules exhibit intramolecular singlet fission in solution. This artwork was created by Miss Yuxiao Duan. [View the article.](#)

The only thing is it starts growing back within 2 to 3 weeks. We were all so excited the first time. Several of us have used it. Like that it is natural ingredients. Second time we used it, it didn't work as well. Those of us that tried it, had the same results. Feel more comfortable using this than all those chemicals.

Since commercial synthetic chemistry was started in the mid-19th century with the introduction of Perkin's mauve dye, the criterion by which chemical products were judged was "performance." Performance has been almost entirely defined as the ability to efficiently accomplish a narrowly defined function (e.g., color for dyes, adhesion for ...

Unlike most organic compounds, dyes possess colour because they 1) absorb light in the visible spectrum (400–700 nm), 2) have at least one chromophore (colour-bearing group), 3) have a conjugated system, i.e. a structure with alternating double and single bonds, and 4) exhibit resonance of electrons, which is a stabilizing force in organic compounds (Abraham,
