Assume that you had 15 nuts (N) and 10 bolts (B). How many N<sub>2</sub>B molecules could you make by screwing two nuts onto each bolt? There are two nuts for each bolt. We have 15 nuts so we can make 7. I'm supposed to "Show all calculation for full credit." Is there anyway of setting up an algebraic equation to demonstrate the work I did?

Limiting Reactant, Theoretical Yield, and Percent Yield

The nuts and bolts are the reactants. They form molecules with 2 nuts on each bolt. Show all calculations when answering questions. Write a chemical equation (reactants on the left and product on the right) that shows how one molecule is made from 2 nuts (N) and 1 bolt (B).
