These metals are widely used in making jewellery sets or for some decorative pieces. Other Uses of Metals

Uses of Metals - Important Applications of Metals, Examples - BYJUS

Description. The combining capacity, or affinity of an atom of a given element is determined by the number of hydrogen atoms that it combines with. In methane, carbon has a valence of 4; in ammonia, nitrogen has a valence of 3; in water, oxygen has a valence of 2; and in hydrogen chloride, chlorine has a valence of 1. Chlorine, as it has a valence of one, can be substituted for hydrogen.

Valence (chemistry) - Wikipedia

Isolation of elements in Chemistry class 12 th aims to teach the students about the various processes of extraction of metals from ores. Very few metals such as the noble metals, i.e., Gold, Silver, ... Ore is a deposit of one or more precious minerals in the Earth's crust.
