This document describes the various electrical circuits used in the 5 Series and shows the wiring connections. Rather than start with a completed wiring diagram showing all circuits and wires, I construct the wiring for each circuit independently. I think this makes it easier to understand a circuit and the entire wiring system.

The typical electronic ballast is a current fed oscillator in the half bridge configuration. Transistors T 1, T 2 and capacitors C 5, C 6 form the half bridge in the circuit electronic ballast for tube light. Diodes D 8, D 9, D 5, D 6 clamp the output voltage values within the supply rails. Diodes D 1 to D 4 and capacitors C 1 to C 3 provide the required DC voltage for the circuit.

Edelbrock recommends a 20 amp fuse protected circuit (which is quite a bit) so it is not recommended to hook it to the ignition coil PLUS terminal. Without knowing what other modifications you have, my only recommendation would be a separate wire from the ignition switch directly to the choke. Ignition power to choke in the "ON" position only.
